EDUCATION

University of Toronto

Sept 2022 – 2027

Honours Bachelor of Science: Computer Science Specialist, Mathematics Minor

- **Awards:** UofT International Scholar, UofT Scholar, UofT Principal's Entrance Award
- **Relevant Courses:** Operating Systems, Parallel Programming, Distributed Systems, Data Structures & Algorithms, Computer Networks, Databases, Machine Learning, AI, Computer Vision, Software Engineering.

EXPERIENCE

Product Manager & Full-Stack Engineer | [SpendWise \(UofT CSC301\)](#)

Jan – Apr 2026

- Led sprint planning and road mapping for a 7-person cross-functional team, coordinating 1-on-1 check-ins to unblock deliverables across UI, backend, and data workstreams.
- Designed and implemented a normalized PostgreSQL scholarship data model in Django with UUID primary keys, indexed filtering fields, and upsert logic, reducing duplicate ingestion errors to zero across re-runs.
- Built an end-to-end web scraping pipeline targeting UofT's Award Explorer, ingesting 4,300+ scholarships by parsing detail pages and normalizing amounts, deadlines, and eligibility fields into structured records.

LLM Engineer | [ourPATHS \(UofT Real World AI/ML Systems\)](#)

May – Sep 2025

- Designed and built an end-to-end AI-powered market-access dashboard with a 5-member cross-functional team, collaborating with stakeholders at 3 pharmaceutical companies to support drug pricing and reimbursement strategy.
- Scraped and processed 800+ Health Technology Assessment (HTA) documents on Niagara supercomputer, generating 10K+ embeddings stored in Azure Blob and a vector database to power scalable, low-latency semantic retrieval.
- Engineered an agentic RAG pipeline with intent classification and GPT-4-mini response formatting, achieving ~95% query routing accuracy and delivering structured, domain-specific insights for industry stakeholders

Software Engineer Intern | ParkUsher | Montreal, QC

Jun – Aug 2025

- Redesigned Premium/Free user profile flows based on user feedback and benchmarking 4 competitor products, then shipped the new React-based front end to 22K+ users via Agile sprints in collaboration with design and marketing.
- Led backend handoff across 6 design-development iterations with clear technical documentation, cutting feature delivery cycle time by 20%.

PROJECTS

[Socrato AI Teaching Assistant](#) | Python (FastAPI, Gemini LLM, Pydantic)

Jan – Apr 2026

- Built a FastAPI REST service integrating Gemini LLM to auto-generate summaries, quizzes, and structured Q&A flashcards from user notes, with Pydantic schema validation and robust JSON parsing for production reliability.
- Developed an interactive flashcard review UI with flip animations, difficulty rating, and an XP/activity tracking system backed by a database, enabling a gamified spaced-repetition study experience.

[Portfolio Optimization Tool](#) | Python (FastAPI, cvxpy, pandas), React, REST API

Dec 2025

- Built a full-stack portfolio optimizer with FastAPI backend that screens user-defined stock universe, solves mean-variance convex optimization (cvxpy) to maximize risk-adjusted returns under volatility constraints.
- Developed a React frontend with live API integration visualizing optimal asset weights, efficient frontier curve, sector allocation breakdown, and portfolio vs. S&P 500 backtest performance across a user-selected date range.

LEADERSHIP

UTM Google Developer Group on Campus | Co-President

Aug 2024 – Aug 2025

- Organized the UofT Women in Tech Conference 2025 (500+ attendees across 2 days), overseeing speaker outreach, volunteer logistics, sponsor coordination, and day-of execution as part of a tricampus GDG team of 40+ members.
- Coordinated a 20-person executive team with \$14k+ in sponsorships to successfully triage and deliver 12+ technical workshops, open-source initiatives, and large-scale networking events for 200+ student participants.

UTM Robotics | Vice President of Finance

May 2024 – May 2025

- Co-organized WallyHacks 2025, UTM's first hardware hackathon for 60+ student teams, navigating mid-planning budget restructuring, technological difficulties, and rescheduling constraints to deliver the event on time.
- Increased club funding by 178% through new sponsorships, enabling hands-on workshops, robotics projects such as [Quanser QBot2e robot soccer](#), and WallyHacks.

TECHNICAL SKILLS

Languages: Python, C, Java, JavaScript, R, SQL (MySQL, PostgreSQL), HTML/CSS, PHP, Bash

Frameworks & Tools: React, Node.js, Next.js, Tailwind, FastAPI, Django, TensorFlow, scikit-learn, NumPy, Pandas, OpenCV, Git, Jira, Figma, AWS, Azure, Docker, LLM/RAG pipelines
